                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to isolated polynucleotide (I) and colyneptide (II) sequences. (I) is useful as hybridisation probes, cc polymerase chain reaction (PCR) primers, oligomers, and for chromosome cc and gene mapping, and in recombinant production of (II). The cc and gene mapping, and in recombinant production of (II) the color identifying expressed genes. (I) is useful in gene therapy techniques (C for identifying expressed genes. (I) is useful in gene therapy techniques (II). (II) is useful for generating antibodies against it, detecting or (II). (II) is useful for generating antibodies against it, detecting or c quantitating a polypeptide in tissue, as molecular weight markers and as c a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating (II) are proposition of sites expressing (II). (I) and (II) are useful for treating (II) are treating (III) are treating (II) are treating (III) are

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to new polynucleotides and polypeptides, useful for diagnosis and treatment of breast, lung and colon cancer. The sequences can be used in detecting differentially expressed genes correlated with a cancerous state of a mammalian cell, comprising detecting at least one differentially expressed gene product in a test sample derived from a cell suspected of being cancerous. They can also be used to inhibit tumour growth by modulating expression of a gene product. AAS36943-AAS39338 represent novel human diagnostic and therapeutic coding sequences of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Reinhard C, F

CC also known as stress kinase inhibitor protein (SKIP-II) polypoptide. The CC htrb polypoptide is useful for inhibiting an AP-1 mediated inflammatory cc signal in a cell. The polypoptide employed in the method is preferably cc htrb-1, htrb-1 N htrb-1 C, htrb-1 N C, htrb-3, htrb-3 N htrb-3 C, or cc htrb-3, ntr is also useful for providing htrb agonist activity for c activating an ERK-mediated signal e.g. AP-1-mediated gene activation cc signal, an estrogen receptor-mediated gene activation signal, an cell. Htrb modulators are useful for modulating AP-1 mediated signal, or a cell. Htrb modulators are useful for modulating AP-1 mediated cinflammatory signal in a cell such as tumor necrosis factor (TNP) crimduced inflammatory signal, or an interleukin induced inflammatory compounds are useful in screening assays, predictive medicine and in therapeutics or prophylactics. The htrb proteins are useful for screening compounds e.g. for treating and/or preventing diseases caused by abhormal htrb activity, such as rheumatoid architits, diabetes, compounds e.g. for treating and/or preventing diseases caused by abhormal htrb activity, such as rheumatoid architits, diabetes, compounds e.g. for treating and/or preventing diseases caused conditions of the caused of the caused of the caused disease are useful for antagonizing conditions a

```
CC prophylaxis or treatment of one or more cancers. (II) is also useful for CC creating transgenic animals useful for studying the in vivo activities of the polypeptide as well as for studying modulators of the polypeptides. (I) induces the proliferation of neural cells and regeneration of nerve CC and brain tissue and is useful for the treatment of central and CC peripheral nervous system diseases and neuropathies, such as Alzheimer's, creativity, regulation of haematopoiesis and is useful for treating myeloid or lymphoid cell disorders, platelet disorders such as thrombocytopenia CC activity, regulation of haematopoiesis and is useful for treating myeloid or lymphoid cell disorders, platelet disorders such as thrombocytopenia CC ulcers, for treating osteoporosis, osteoarthritis, bone degenerative disorders, or periodontal disease. Furthermore, (I) is also useful for cylerission injury in various tissue, various immune deficiencies and constitis, diaberes mellitus, myasthenia gravis, allergic resections, autoimmune disorders e.g. multiple sclerosis, creations, autoimmune disorders e.g. multiple sclerosis, compatitity, metabolism, catabolism, anabolism, storage or elimination of distary fat, lipid, protein, carbohydrate, vitamins, minerals, provides analgesic effects or other pain reducting effects, immunoglobulin like catabone. Ahs44920-Ahs45295 represent novel human secreted protein codding sequences of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   and polynucleotides (II). (I) and (II) are useful for treating inflammatory conditions such as arthritis, nephritis, Crohn's diseatischaemia-reperfusion injury, shock, sepsis, immune responses, and involved in increasing haematopolesis, stem cell survival, bone groand remodeling. (II, (II) and modulators of (II) are useful for prophylaxis or treatment of one or more cancers. (II) is also useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Novel polypeptides and nucleic acids obtained from cDNA libraries prepared from various human tissues, for diagnosis and treatment cancer, neurological, inflammatory, and autoimmune disorders -

Clone distribution: MGC clone distribution information can be for through the I.M.A.G.E. Consortium/LLNL at: http://image.llnl.gov geries: IRAK Plate: 23 Row: k Column: 9
This clone was selected for full length sequencing because it passed the following selection criteria: Hexamer frequency ORF analysis, Similarity but not identity to protein.

On Mar 19, 2000 this sequence version replaced gi:5541861.
During sequence assembly data is compared from overlapping clon
                                                                                                                                                                                                                                                                        HS1103G7

HS3170 bp

DNA

linear PRI 08-PBB-2001

Human DNA sequence from clone RP5-1103G7 on chromosome 20p12.2-13.

Contains up to three novel genes, the gene for a novel protein

similar to mouse VMP, the gene for a novel protein kinase domains

containing protein similar to phosphoprotein C8FW and rat NIPK, and

the 60X22 gene for SRY (sex-determining region Y)-box 22. Contains

five CpG islands, ESTs, STSs and GSSs, complete sequence.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      http://www.sanger.ac.uk/Projects/C elegans/wormpep This sequence is the entire insert of clone RP5-1103G7 This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. This sequence was generated from part of bacterial clone contigs of human chromosome 20, constructed by the Sanger Centre Chromosome 20 Mapping Group. Purther information can be found at http://www.sanger.ac.uh/HGP/Chr20
RP5-1103G7 is from the library RPCI-5 constructed by the Spiter de Jong. For further details see
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that traition annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences only a small overlap as described above.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The following abbreviations are used to associate primary accession numbers given in the feature talls with their source databases:
